### DETAILED ACTION

1. The Notice of Allowability mailed 5/13/2005 is withdrawn.
2. Claims 1-6 and 15-19 stand.

#### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-6 and 15-19 are rejected under 35 U.S.C. 102(e) as being anticipated by Huang US2004/0194627, that in Figure 9 teaches the invention as disclosed and as claimed: a gas turbine assembly comprising a compressor 30, a combustor 32, a turbine 34, an air passage from compressor 30 to turbine 34 for supplying cooled air, the passage being represented by the line labeled "AIR" from compressor 30 to heat exchanger HEX 82, to compressor 39, to turbine 34, and a fuel deoxygenator 16, said fuel deoxygenator comprising a permeable membrane (paragraph 31), coated with polytetrafluoride (paragraph 36), and a porous substrate supporting said membrane (paragraph 36), a vacuum source to draw the dissolved gases out of the fuel (paragraph 32), and a strip gas passage 35 (paragraph 34) to draw the dissolved gases.

Paragraph 48 describes in detail Fig. 9. Regarding the claim limitations, and in particular the claim of the air passage to from the compressor to the turbine, it is noted that claim

32 "receiving a compressed air stream from a compressor of said engine into a heat exchanger" and its dependent claim 34 "directing said compressed air stream from said heat exchanger to a turbine of said engine" inherently claim said passage, because a flow can be received and directed only via passages. Method claims 15-19 are rejected because Huang specifically teaches that the apparatus of Fig. 9 performs the claimed method steps, the teachings being given in the cited locations above.

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.
